Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1, 3, 7-11, 13-21, 43-46, 49-53, and 56 are provisionally rejected under the judicially created doctrine of double patenting over claims 1-18 of copending Application No. 09/888,943. This is a provisional double patenting rejection since the conflicting claims have not yet been patented.

The subject matter claimed in the instant application is fully disclosed in the referenced copending application and would be covered by any patent granted on that copending application

Application/Control Number: 09/888,732

Art Unit: 3743

since the referenced copending application and the instant application are claiming common subject matter, as follows:

The copending application discloses a valve body, a frame, a valve opening, a valve seat, a valve flap having a plurality of support member (such as a rib). The valve flap has a contour shape and a portion of the contour shape of the valve flap is at least partially flattened when the valve flap contacts the valve seat. Furthermore, the copending application discloses that the valve flap comprises a first side and a second side, in which the valve contour varies between the first and second side. The valve flap has a compound curvature and the flap comprises a first and second end, wherein the valve contour varies between the first and second ends. The copending application further discloses that the valve seat is generally planar and valve flap has a curvature that causes a bias of the valve flap toward the valve seat to provide a seal between the valve flap and the valve seat. The valve is an exhalation valve, an inhalation valve. The valve flap is removably attached to the valve body.

Similarly the present application claims a valve body, a frame, a valve opening, a valve seat, a valve flap having at least one rib. The valve flap has a contour shape and a portion of the contour shape of the valve flap is at least partially flattened when the valve flap contacts the valve seat. Furthermore, the present application states that the valve flap thickness of a base part of the valve flap outside of the rib decreases when moving from first end to the second end. The present application further discloses that the valve seat is generally planar and valve flap has a curvature that causes a bias of the valve flap toward the valve seat to provide a seal between the valve flap and the valve seat. The valve is an exhalation valve, an inhalation valve. The valve flap is removably attached to the valve body.

Art Unit: 3743

Furthermore, there is no apparent reason why applicant would be prevented from presenting claims corresponding to those of the instant application in the other copending application. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

Allowable Subject Matter

3. Claim34-42 are allowed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Azy Kokabi whose telephone number is (703) 306-4154. The examiner can normally be reached on Monday- Friday, 6:30am to 4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Henry Bennett can be reached on (703) 308-0101. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
